

Collaborate & Work More Effectively with Microsoft

Microsoft 365 is an integrated collection of cloud-hosted Software as a Service (SaaS) solutions for email, collaboration and communication delivered through the same Office products you already know and use every day.

IntegraONE helps customers with all core components of Microsoft/Office 365; Exchange Online, SharePoint Online, OneDrive, Teams, Yammer, Project Online, Delve, Sway, and Microsoft 365 Apps (formerly Office 365 Pro Plus.)

Because Microsoft 365 is powered by the Microsoft cloud, businesses get to their applications and files from virtually anywhere; PC, Mac, and mobile devices, and they are always up to date. This means that IT teams can lower the burden required to run these enterprise-grade products and lower their dependence on on-premises infrastructure. Given the push for more remote and mobile work conditions, adopting Microsoft 365 has become the standard for customers over on-premises solutions.

We begin Microsoft 365 engagements by performing a rigorous business, technical and economic analyses to determine migration blockers and accelerators. From there, our Microsoft-certified consultants plan and architect all aspects of the upgrade and migration paths and collaborate with your team for the deployment and migration. We create positive staff experiences through process-driven quality assurance at both the server and client levels empowering your IT and business teams through Microsoft-certified education and learning curricula.

Enterprises planning to move strategic workloads to the cloud must consider how identity works across cloud services and platforms. One result of cloud-based computing is the introduction of new identities for enterprise associates. The challenge becomes how to manage these identities in an efficient manner while maintaining appropriate levels of access. Identification, authentication, and authorization must be extended across organizational and platform boundaries. Industry standard methods must be used while conforming to policies by which an organization runs its business. Cloud identity solutions can provide web single sign on capabilities that allow access to multiple applications over the life of a single online session. IntegraONE has many options to help our customers plan and execute a successful strategy.

Key Solution Pillars

Plan-Build-Operate-Support:

We support each of our customers from planning, through building and migration, and all throughout their time operating our solutions. From the preliminary business analysis to implementation and beyond with our ongoing education and support, you have a true expert business relationship with IntegraONE and our FusionONE managed services.

Knowledge Transfer and Education:

The IntegraONE team hold various events, webinars, and in-person opportunities for our clients. We always push for innovation, and that means learning with IntegraONE never ends!

Security:

Because your identity lifecycle management process can be operated through the cloud, you can rest assured knowing that your information will not be lost, and that costs will remain low, since the cloud avoids large infrastructure remodeling.

IntegraONE can pair this with additional cloud and hybrid solutions to fully integrate with business processes for a powerful solution.

IntegraONE's Microsoft Collaboration Solutions

- ✓ Hybrid Identities (between On-Premises Active Directory and Azure AD)
- ✓ Single Sign-On & Same Sign-On scenarios
- ✓ Integration w/ non-Microsoft Cloud Services
