

Empowering Your Business Through the Microsoft Azure Platform

The cloud is no longer some future-state. It is here and now. Adopting a cloud-first platform is one of the best ways to maintain a future-proofed competitive advantage. It helps your organization remain relevant, reduce maintenance costs compared with legacy infrastructure and provides users with the most productive platform to build and deploy applications on.

Microsoft Azure is the most cohesive Microsoft business product to aid your organization in streamlining various business systems and processes. Microsoft Azure is a fully stacked and capable cloud-computing platform, scalable to any business size and customizable for any purpose.

Because Microsoft Azure is run through the cloud, your employees can access the information and applications they need in real time, from any location with ease. This also allows for uniformity and continuity for a familiar experience, no matter the device. Microsoft Azure also brings high-availability and business continuity to any sized business, not just for large enterprises. There is now the ability to bring the most important business data to your fingertips in the form of a user-friendly dashboard that allows you to mold data into useful information, as well as monitor your usage of virtual machines (VMs).

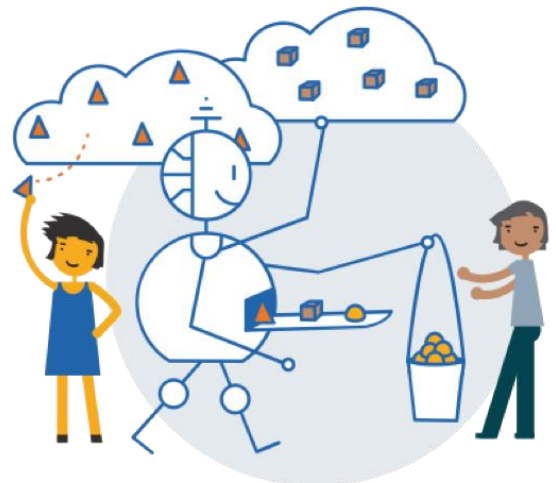

Microsoft Azure has many tools and virtual machines that allow you to customize your business processes and monitoring. You can run preconfigured applications with Azure, such as WordPress and notable CRMs, or create complex machines that run together to bring you the streamlined operations you need. IntegraONE has Microsoft-certified

Azure experts and consultants who help to guide your enterprise on its cloud journey and beyond, scaled to your needs and optimized for maximum impact. We offer a set of services to meet you where you are today and lead you to a transformed tomorrow.

Key Solution Pillars:

Plan-Build-Operate-Support:

IntegraONE functions on a Plan-Build-Operate model, meaning that we support each of our customers from planning, through building and migration, and all throughout their time operating our solutions. From the preliminary business analysis to implementation and beyond with our ongoing education and support, you have a true expert business relationship with IntegraONE and our FusionONE managed services.

Knowledge Transfer and Education:

The IntegraONE team hold various events, webinars, and in-person opportunities for our clients. We always push for innovation, and that means learning with IntegraONE never ends!

Security:

Because your identity lifecycle management process can be operated through the cloud, you can rest assured knowing that your information will not be lost, and that costs will remain low, since the cloud avoids large infrastructure remodeling. IntegraONE can pair this with additional cloud and hybrid solutions to fully integrate with business processes for a powerful solution.

IntegraONE's Microsoft Cloud Platform Solutions

- ✓ Digital Transformation Services
 - Workload and Application Analysis
 - IaaS and PaaS Management
 - CSP Subscription Management
- ✓ Datacenter and Application Transformation
 - Understand the Total Cost of Ownership w/ the Cloud
 - Cost Right-sizing for the Cloud
 - Discovery Techniques and Tools
 - Top Down vs. Bottom Up approaches
 - Migration Planning Approaches
 - Web Servers/Services in Azure
 - File Services in Azure
 - Decision Tree for Migration Strategy
 - Migration Services
- ✓ Identity and Access Management
 - Evaluate Current Network Capability to Hybrid with Cloud
 - Site-to-Site VPN to Azure vs. Express Route
 - Express Route options
 - Hosted Network Provider
 - Hosted Datacenter Provider
 - DR / HA Scenarios with Hybrid Datacenters
 - Active Directory redundancy
 - Azure AD Connect in the Azure
 - Security Benefits of Azure over AWS and Google
- ✓ Hybrid Cloud Networking / Hybrid Datacenters
 - Evaluate Current Network Capability to Hybrid with Cloud
 - Site-to-Site VPN to Azure vs. Express Route
 - Express Route options
 - Hosted Network Provider
 - Hosted Datacenter Provider
 - DR / HA Scenarios with Hybrid Datacenters
 - Active Directory redundancy
 - Azure AD Connect in the Azure
 - Web Servers/Services in Azure
 - Security Benefits of Azure over AWS and Google
- ✓ Backup and Disaster Recovery Services
 - Azure Backup
 - Azure Site Recovery
 - Third-party Solutions (Veeam, Symantec, VMware)
 - Integrate with Managed Services offerings
- ✓ Security and Compliance
 - Data Retention Policies
 - Governance and Compliance Policies (HIPAA, PCI, FinServ)
 - Online Archives
 - Multi-Factor Authentication
 - Single Sign-On
 - Conditional Access Controls
 - Azure Active Directory
 - Azure Information Protection
